SUMMARY

Backend-focused Software Engineer experienced in designing and scaling distributed systems, microservices, and data pipelines for production environments handling millions of records. Proven track record of improving API performance, building AI-powered product capabilities, and delivering complex cross-functional projects end-to-end. Strong expertise in building reliable, scalable backend systems and solving complex engineering challenges. Seeking a Senior Software Engineer role focused on large-scale systems, infrastructure, and impactful product development.

TECHNICAL SKILLS

Languages:	Java (primary), Python, SQL, NoSQL, Bash/Linux
Frameworks:	Spring Boot, Spring MVC, Django, LangChain
Databases:	MongoDB, MySQL, OracleSQL, Elasticsearch, Redis
Infrastructure:	Kubernetes, Docker, AWS (EC2, S3), Jenkins, Kafka, Apache NiFi
AI Tools:	Claude Code, Cursor, GitHub Copilot
Practices:	Microservices, Distributed Systems, REST API Design, CI/CD, Unit Testing (JUnit)
CS Fundamentals:	Data Structures & Algorithms, OOP, OS, Computer Networks, System Design

WORK EXPERIENCE

Birdeye | India *Jun 2024 – Present*
Software Development Engineer

- Led the development of the "Listings AI Optimizer" platform, delivering AI-powered SEO and discoverability recommendations for enterprise brand listings across major AI search and discovery platforms, significantly enhancing customer visibility and engagement.
- Improved P95 latency of three high-traffic Listing microservice APIs by 40% through deep performance profiling, MongoDB aggregation pipeline optimization, query tuning, and implementation of distributed caching strategies.
- Led the development of Birdeye Listings' in-house direct integrations, eliminating third-party vendor dependency and enabling a zero-downtime migration of 300K+ accounts with 100% migration accuracy, significantly reducing vendor costs.
- Architected and executed a zero-downtime MongoDB migration from v3 to v7 across distributed microservices, including schema compatibility planning, driver upgrades, index migration, phased production rollout, and rollback automation.
- Developed scalable AI-driven analytics modules including sentiment analysis, listing accuracy validation, and AI-O reporting systems, enabling enterprise brands to measure and improve listing quality across AI-powered search ecosystems.
- Designed and implemented a custom observability and alerting framework capturing end-to-end API request/response traces with automated Slack and email notifications for 5xx failures, substantially reducing production incident detection time (MTTD).
- Collaborated across multiple engineering teams to deliver integrations, proof-of-concepts, and critical platform improvements, enhancing reliability, scalability, and throughput in a large-scale multi-tenant distributed architecture.

Stack: Java, Spring Boot, MongoDB, Kafka, NiFi, MySQL, Elasticsearch, Kubernetes, Docker, Jenkins, JUnit, LangChain, Maven, Redis

Radram Quality Services (Al Mulla Exchange) | India *May 2023 – Jun 2024*
Software Development Engineer

- Designed and delivered a centralized Reward Management Platform adopted across multiple group entities, enabling loyalty points, lounge access, scratch cards, and coupon workflows for 1M+ users, contributing to higher customer retention and repeat transaction growth.
- Revamped the remittance Dynamic Pricing Engine with intelligent route-level optimization, reducing pricing inconsistencies by ~35% and improving customer satisfaction and conversion metrics across key corridors.
- Directed migration of enterprise services from Java 8 to Java 21 across distributed applications, modernizing the codebase with records, sealed classes, and virtual threads while reducing technical debt and improving application throughput and maintainability.
- Engineered secure backend services for MPIN and biometric-based authentication flows on mobile applications, lowering average login response time by ~45% while strengthening platform security and authentication reliability.

Stack: Java, Spring Boot, MongoDB, OracleSQL, AWS (EC2), Jenkins, Maven, Microservices, Redis

Tata Consultancy Services | New Delhi, India *Sept 2021 – May 2023*
Software Development Engineer

- Built and supported mission-critical enterprise applications for DGCA (Directorate General of Civil Aviation) and multiple Indian Government organizations, delivering backend services, production enhancements, and database solutions supporting high-volume operational workflows.
- Developed a scalable Management Information System (MIS) module featuring dynamic filter-based analytics and automated Excel report generation, reducing manual reporting effort by ~80% and significantly improving operational efficiency.
- Partnered closely with QA and DevOps teams throughout the software delivery lifecycle, accelerating release cycles, improving deployment stability, and ensuring reliable production rollouts across multiple environments.

Stack: Java, Spring, ZK Framework, MySQL, Jenkins, SVN, HTML, Maven

MuSigma | Bengaluru, India *Apr 2021 – Sept 2021*
Software Development Intern

- Engineered real-time data synchronization pipelines using Python and Hadoop across distributed platforms, processing large-scale datasets with high reliability and enabling near real-time availability for downstream analytics and reporting systems.
- Developed interactive KPI dashboards using Django with dynamic visualizations and reporting capabilities, reducing stakeholder decision-making turnaround time by ~60% and improving operational visibility across business functions.

Stack: Python, Django, SQL, Java, Hadoop

PROJECTS

TrueLinq — Contact & Digital Card Platform *2024 | Java, Spring Boot, AWS*

- Built scalable backend APIs for personal/business digital contact cards, shared contact lists, and digital invitations; focused on API design, cloud infrastructure, and throughput under concurrent load.

Hotel Review Management System *2020 | Java, Spring Boot, Spring Cloud, Microservices*

- Designed a microservices-based platform for posting, managing, and analyzing hotel reviews with inter-service communication via Spring Cloud, demonstrating distributed system principles.

EDUCATION

Institute of Engineering & Technology (IET), Lucknow *Aug 2017 – Aug 2021*
B.Tech — CGPA: 8.90/10

Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Databases, Operating Systems, Computer Networks

ACHIEVEMENTS

- Secured **1st Place — AI Hackathon at Birdeye** among multiple engineering teams by building and presenting an innovative AI-driven prototype within a limited development window.
- Received the **"Employee of the Month" Award at Birdeye** for leading high-impact platform initiatives, delivering ~40% API performance improvements, and consistently driving critical production deliverables.
- Earned the **"Fastest Learner" Award at Al Mulla Exchange** for rapidly onboarding to new technologies and contributing to production systems within the first few months of joining the team.
- Solved **700+ algorithmic and data structure problems** across platforms including LeetCode and HackerRank, strengthening expertise in problem-solving, system design, and competitive programming.
- Mentored **50+ students and professionals** through Chegg on data structures, algorithms, coding interviews, and system design concepts, helping improve technical proficiency and interview readiness.
